Registration:

- Create two account types: **Admin** and **Employee**.
- Each account will have an **auto-increment account number**, assigned automatically based on the number of registered accounts. The account number may be displayed on the registration page but **cannot be modified (hide for edit)**.
- Encrypt passwords using **MD5 hashing**.
- Passwords must meet the following criteria:
    - **Match the "Password" and "Confirm Password" fields**. If they do not match, display a prompt: **"Password inputs do not match."**
    - Contain **8-20 characters**, including **both letters and numbers**. If the input does not meet this requirement, display a prompt: **"Password must contain letters, numbers, and be 8-20 characters long."**
        - Note: error will be base on the inputs of user. User must determine what requirements for input of password does not met.
    - If all conditions are met, the system should automatically **proceed to the Login page**.

Login Page:

- Allow all registered accounts to log in.
- The **account number and password must match**. If they do not, display a prompt: **"Invalid account number" or "Wrong password."**
- Upon successful login, the system should redirect the user to the **Dashboard**, based on their access level.

Dashboard:

- **Admin Dashboard (2 pages):**
    - Display a welcome message: **"Welcome, Admin <username>!"**
    - **Manage Accounts:** Show a table of registered users, including:
        - Account Number
        - First Name
        - Last Name
        - Username
        - Password (encrypted)
- **Employee Dashboard (1 page):**
    - Display a welcome message: **"Welcome, <username>!"**
- **Logout Button:**
    - Redirects the user back to the **Login page**.

- Sample Dashboard
