Project Setup & Deployment Guide

Follow these steps to run the project on your computer, upload it to GitHub, and connect it to Vercel.

Prerequisites: Required Software

1. Visual Studio Code
Download from *code.visualstudio.com*

2. Node.js (LTS)
Download from *nodejs.org*

3. Git
Download from *git-scm.com/downloads*

1 Run the Project Locally

1. Extract (unzip) the provided ZIP file on your computer.
2. Open the extracted folder using **VS Code**.
3. Open the terminal (**Terminal > New Terminal**) and run:

```
# 1. Install project packages
npm install

# 2. Start the local server
npm run dev
```

Open **http://localhost:5173** in your browser to view the website.

2 Create a Blank GitHub Repository

1. Go to **github.com** and click **New repository**.
2. Enter a repository name and set visibility to **Private**.
3. **Important:** Leave all initialization boxes unchecked (keep it completely blank).
4. Click **Create repository** and copy the HTTPS URL.

3 Upload Code to GitHub

1. Open a new terminal in **VS Code** (**Terminal > New Terminal**).
2. Run the following commands one by one, pressing **Enter** after each line:

```
# 1. Initialize Git
git init

# 2. Stage all files
git add .

# 3. Save initial commit
git commit -m "Initial upload"

# 4. Set primary branch to 'main'
git branch -M main

# 5. Link to your GitHub URL (paste your copied URL here)
git remote add origin https://github.com/your-username/your-repo.git

# 6. Upload code to GitHub
git push -u origin main
```

4 Connect to Vercel

1. Log in to your **Vercel account** and open the project dashboard.
2. Go to **Settings** at the top, then click **Git** on the left sidebar.
3. Under *Connected Git Repository*, click **Disconnect**.
4. Click **Connect GitHub**, select your new repository, and click **Connect**.

> **Deployment Complete**
>
> Your Vercel site is now linked to your GitHub repository. Any future changes pushed to GitHub will automatically update the live website.
